BILLIE CASH · SECRET PDF NO.01

01

Claude, *weaponized*

How one person runs like a company. The operator holds the compass; the machine does the miles.

THE FRAME

You are the hand, not the glove

Most people ask AI to think for them and wonder why the output is average. You don't outsource the judgment — you outsource the *miles*. The thinking, the taste, the final call stay yours. The machine does volume.

The leverage isn't "AI writes my stuff." It's that a single person can now hold the roles of a small company — research, build, write, ship — and still move at the speed of one clear mind. The bottleneck stops being hands. It becomes taste.

> THE ONE RULE
>
> Delegate *gathering*, never *judgment*. Finding where the code lives, dumping the relevant files, running the build, drafting the first pass — farm it. Finding the bug, making the call, the final polish — that's you. The cheap way to think better is not skipping the smart step; it's feeding the smart step more.

THE STACK

What to actually point it at

- **Build** — scaffold, refactor, wire the plumbing. You design; it types.
- **Research** — collapse an hour of reading into a dense brief you verify.
- **Write** — first drafts at volume, in your voice, that you then cut.
- **Ship** — the mechanical last mile: tests, builds, deploys, the stuff that stalls people.

PROMPT DISCIPLINE

Context in, quality out

01 **State the goal and what you've ruled out.** A blank ask gets a blank-ask answer.

02 **Point at the real files, don't retype them.** The machine reads faster than you paste.

03 **Give one example of "good."** Taste transfers by sample, not adjective.

04 **Verify at the destination, not the source.** "It should work" is not "I saw it work." Open the result.

THE SHIP LOOP

Build, verify, ship — then stop

The failure mode isn't moving too fast. It's polishing something nobody asked for while the thing that matters sits unshipped.

> *High quality, then ship. Not "#1 on earth or don't post." That was always an excuse to stall.*

ACTION

Do this now: take the one task you've been "getting to." Write three lines — the goal, what you already know, the file or place it lives. Hand that to the machine. Ship the draft today, cut it tomorrow.
